 Lon: -79.083  
 Country:

# 1. Biodiversity Importance (Marine Integrated)

Global level: **[VERY HIGH]**  
 Regional level: **[HIGH]**

Biodiversity Importance (Marine Integrated)  
 Map around the location

**The site here has value 0.95 of biodiversity importance in [0-1] scale with 1 highest importance, meaning [VERY HIGH] importance of marine biodiversity.**  
**Among , the value for the site here has #TOP 24.9% rank at national level, meaning [HIGH] importance of marine biodiversity.**

## Biodiversity Importance (Marine Integrated):

An indicator of the importance of site's biodiversity in terms of extinction risk reduction, calculated using the species composition of +300,000 marine species, ranging from 0 to 1, with higher values indicating greater importance.

## 2. Marine Biodiversity Intactness (2013)

Global level: [INTERMEDIATE]  
 Regional level: [MODERATELY LOW]

Marine Biodiversity Intactness (2013)  
 Map around the location

The site here has value 0.46 of biodiversity intactness in [0-1] scale with 1 intact and 0 worst degraded, meaning [INTERMEDIATE] intactness of marine ecosystem. Among , the value for the site here has #TOP 69.1% rank at national level, meaning [MODERATELY LOW] intactness rank of marine biodiversity.

### Marine Biodiversity Intactness (2013):

An index that represents the intactness of marine ecosystem by quantifying degrees of modification of ecosystems due to use of human (fishery, shipping, construction, climate change etc.) as a proxy for biodiversity loss. Higher values indicate a higher degree of ecosystem integrity (1: intact ~ 0: heavily degraded).

## Global context

In the global context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in global level with red means high density and blue low.

## Regional context

In the regional context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in regional level. Note that white broken lines show the national average of the two metrics.

## SPECIES RICHNESS BY TAXONOMIC GROUPS - DETAILED OPTION

**This site has a remarkable species richness for:**

**[MARINE FISH]**  
**[MARINE CRUSTACEAN]**  
**[MARINE SHELL]**  
**[SEABIRD]**  
**[MARINE MAMMAL]**  
**[MARINE ALGAE]**  
**[CORAL]**  
**[MARINE REPTILE]**

## BIODIVERSITY IMPORTANCE BY TAXONOMIC GROUPS - DETAILED OPTION

**This site has a remarkable biodiversity importance for:**

**[MARINE\_FISH]**  
**[CRUSTACEAN]**  
**[SHELL]**  
**[SEABIRD]**  
**[MAMMAL]**  
**[ALGAE]**  
**[CORAL]**  
**[REPTILE]**
