 Country:

1. Biodiversity Importance (Marine Integrated)

Global level: **[VERY HIGH]**
 Regional level: **[VERY HIGH]**

Biodiversity Importance (Marine Integrated)
 Map around the location

The site here has value 0.99 of biodiversity importance in [0-1] scale with 1 highest importance, meaning [VERY HIGH] importance of marine biodiversity.
Among , the value for the site here has #TOP 0.2% rank at national level, meaning [VERY HIGH] importance of marine biodiversity.

Biodiversity Importance (Marine Integrated):

An indicator of the importance of site's biodiversity in terms of extinction risk reduction, calculated using the species composition of +300,000 marine species, ranging from 0 to 1, with higher values indicating greater importance.

2. Marine Biodiversity Intactness (2013)

Global level: [INTERMEDIATE]
 Regional level: [INTERMEDIATE]

Marine Biodiversity Intactness (2013)
 Map around the location

The site here has value 0.44 of biodiversity intactness in [0-1] scale with 1 intact and 0 worst degraded, meaning [INTERMEDIATE] intactness of marine ecosystem. Among , the value for the site here has #TOP 42.4% rank at national level, meaning [INTERMEDIATE] intactness rank of marine biodiversity.

Marine Biodiversity Intactness (2013):

An index that represents the intactness of marine ecosystem by quantifying degrees of modification of ecosystems due to use of human (fishery, shipping, construction, climate change etc.) as a proxy for biodiversity loss. Higher values indicate a higher degree of ecosystem integrity (1: intact ~ 0: heavily degraded).

Global context

In the global context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in global level with red means high density and blue low.

Regional context

In the regional context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in regional level. Note that white broken lines show the national average of the two metrics.

SPECIES RICHNESS BY TAXONOMIC GROUPS - DETAILED OPTION

This site has a remarkable species richness for:

[MARINE FISH]
 [MARINE CRUSTACEAN]
 [MARINE SHELL]
 [SEABIRD]
 [MARINE MAMMAL]
 [MARINE ALGAE]
 [CORAL]
 [MARINE REPTILE]

BIODIVERSITY IMPORTANCE BY TAXONOMIC GROUPS - DETAILED OPTION

This site has a remarkable biodiversity importance for:

[MARINE_FISH]
 [CRUSTACEAN]
 [SHELL]
 [SEABIRD]
 [MAMMAL]
 [ALGAE]
 [CORAL]
 [REPTILE]
