1. Biodiversity Importance (Marine Integrated)

Global level: **[VERY HIGH]**
 Regional level: **[VERY HIGH]**

Biodiversity Importance (Marine Integrated)
 Map around the location

The site here has value 0.99 of biodiversity importance in [0-1] scale with 1 highest importance, meaning [VERY HIGH] importance of marine biodiversity.
Among , the value for the site here has #TOP 0.6% rank at national level, meaning [VERY HIGH] importance of marine biodiversity.

Biodiversity Importance (Marine Integrated):

An indicator of the importance of site's biodiversity in terms of extinction risk reduction, calculated using the species composition of +300,000 marine species, ranging from 0 to 1, with higher values indicating greater importance.

2. Marine Biodiversity Intactness (2013)

Global level: **[LOW]**
 Regional level: **[VERY LOW]**

Marine Biodiversity Intactness (2013)
 Map around the location

Marine Biodiversity Intactness (2013)
 Histogram at global scale

Marine Biodiversity Intactness (2013)
 Histogram at regional scale

The site here has value 0.19 of biodiversity intactness in [0-1] scale with 1 intact and 0 worst degraded, meaning [LOW] intactness of marine ecosystem. Among , the value for the site here has #TOP 99.4% rank at national level, meaning [VERY LOW] intactness rank of marine biodiversity.

Marine Biodiversity Intactness (2013):

An index that represents the intactness of marine ecosystem by quantifying degrees of modification of ecosystems due to use of human (fishery, shipping, construction, climate change etc.) as a proxy for biodiversity loss. Higher values indicate a higher degree of ecosystem integrity (1: intact ~ 0: heavily degraded).

Global context

In the global context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in global level with red means high density and blue low.

Regional context

In the regional context, Biodiversity importance of the location is [High], and Biodiversity Intactness of the location is [Low].

Thus, the areas around focused site are suitable areas for nature-positive activities.

Background density plot shows the distribution of points in importance-intactness axes in regional level. Note that white broken lines show the national average of the two metrics.

SPECIES RICHNESS BY TAXONOMIC GROUPS - DETAILED OPTION

This site has a remarkable species richness for:

[MARINE FISH]
 [MARINE CRUSTACEAN]
 [MARINE SHELL]
 [SEABIRD]
 [MARINE MAMMAL]
 [MARINE ALGAE]
 [CORAL]
 [MARINE REPTILE]

BIODIVERSITY IMPORTANCE BY TAXONOMIC GROUPS - DETAILED OPTION

This site has a remarkable biodiversity importance for:

[MARINE_FISH]
 [CRUSTACEAN]
 [SHELL]
 [SEABIRD]
 [MAMMAL]
 [ALGAE]
 [CORAL]
 [REPTILE]
